

ITST 302 – Client-Server Technologies

Week 5 Laboratory Activity

Mini Project 04: Responsive Product Landing Page using Laravel, Tailwind CSS, and Blade Components

Course Information

Item	Details
Course	ITST 302 – Client-Server Technologies
Week	Week 5
Module	Module 1 – Frontend Development with Laravel
Topic	Blade Components, Tailwind CSS, Responsive Design, and Reusable UI
Mini Project	MP04 – Responsive Product Landing Page
Project Type	Individual
Points	100 Points
Submission	GitHub Repository + Documentation + LinkedIn Portfolio + LMS

Activity Overview

- In today's web development industry, the **landing page** is one of the most valuable digital assets for businesses. It serves as the first impression of a product or service and plays a critical role in attracting customers, increasing engagement, and improving conversion rates.
- As a Laravel developer, creating responsive, reusable, and maintainable user interfaces is an essential skill. Rather than repeating HTML code across multiple pages, modern Laravel applications use **Blade Components** to build modular interfaces, while **Tailwind CSS** enables developers to rapidly create professional, responsive designs.
- In this laboratory activity, students will design and develop a **modern Product Landing Page** for a technology product or startup using Laravel, Blade Components, and Tailwind CSS. Students are encouraged to follow modern UI/UX principles inspired by platforms such as **Apple, Stripe, Notion, or Linear**, while maintaining originality.
- This project emphasizes component-based development, responsive design, and clean user interface architecture—skills highly valued in the software industry.

Intended Learning Outcomes (ILO)

At the end of this laboratory activity, students should be able to:

1. Develop responsive web interfaces using Tailwind CSS.
2. Create reusable Blade Components to eliminate duplicated code.
3. Apply responsive design principles for desktop, tablet, and mobile devices.
4. Organize frontend components following Laravel best practices.
5. Implement consistent UI design using typography, spacing, colors, and layouts.
6. Document frontend architecture and reusable component design.
7. Publish a professional portfolio project through GitHub and LinkedIn.

Learning Objectives

Upon completion of this activity, students will:

- Build responsive interfaces using Tailwind CSS.
- Understand component-based frontend architecture.
- Create reusable Laravel Blade Components.

- Apply responsive layouts using Flexbox and Grid.
- Continue building their professional portfolio.

Mini Project

Project Title

Responsive Product Landing Page

Scenario

- **Look around your community-** Find an **existing real business** that you can observe or research. It can be a small shop, barber shop, salon, restaurant, café, clothing store, food business, repair shop, online seller, family business, or even **your own existing business**.
- Your task is to **create a modern landing page for that real business** using Laravel- The goal is to transform the business's existing information, products, services, and brand identity into a **clean, responsive, and professional landing page** that can help the business present itself better online.

Required Sections

Your landing page must include the following sections:

1. Navigation Bar

Include:

- Company Logo
- Home
- Features
- Pricing
- Testimonials
- Contact
- Sign In Button
- Get Started Button

2. Hero Section

Include:

- Product Name
- Catchy Headline
- Short Product Description
- Primary Call-to-Action Button
- Secondary Button
- Product Illustration or Mockup

3. Features Section

Display at least **six (6)** product features.

Each feature should include:

- Icon
- Feature Title
- Short Description

4. Product Showcase

Include:

- Product Screenshot
- Dashboard Preview

- Mobile View
- Key Highlights

5. Pricing Section

Include at least **three pricing plans**.

Example:

- Starter
- Professional
- Enterprise

Each card should display:

- Plan Name
- Price
- Included Features
- Subscribe Button

6. Testimonials

Include at least **three customer testimonials**.

Each card should contain:

- Customer Photo
- Name
- Position
- Review

7. Call-to-Action Section

Encourage users to:

- Register
- Contact Sales
- Start Free Trial

8. Footer

Include:

- Company Information
- Quick Links
- Social Media Icons
- Contact Information
- Copyright

Technical Requirements

Students must use:

Laravel Blade Components

The following UI elements must be reusable components:
components/

```

|
|— navbar.blade.php
|— hero.blade.php
|— feature-card.blade.php
|— pricing-card.blade.php
|— testimonial-card.blade.php
|— button.blade.php
|— footer.blade.php

```

Students are encouraged to create additional components as needed.

Tailwind CSS

The landing page must use:

- Responsive Grid
- Flexbox
- Utility Classes
- Responsive Breakpoints
- Hover Effects
- Shadows
- Rounded Corners
- Spacing Utilities

Responsive Design

The landing page must be optimized for:

- Desktop
- Laptop
- Tablet
- Mobile Phone

Students should test responsiveness using browser developer tools.

Laravel Layouts

Use:

layouts/

app.blade.php

All pages must extend the main layout.

Project Structure

week05-product-landing-page/

GitHub Repository

- Repository Name
- week05-product-landing-page
- Repository must be **Public**.

Git Requirements

Minimum of **10 meaningful commits**.

Example commit messages:

- feat: create landing page layout
- feat: build responsive navbar
- feat: create reusable hero component
- feat: build feature cards
- feat: implement pricing section
- feat: add testimonials
- style: improve responsive spacing
- refactor: optimize Blade components
- docs: update README
- docs: upload screenshots

Documentation Requirements (README.md)

The README must contain the following sections:

1. Project Title

2. Introduction

Explain:

- What is a Product Landing Page?
- Why landing pages are important for businesses.
- Purpose of the project.

3. Objectives

List the learning objectives accomplished during the activity.

4. Responsive Web Design

Discuss:

- Mobile-First Design
- Responsive Breakpoints
- Flexbox
- CSS Grid
- User Experience (UX)

Explain why responsive design is important in modern web applications.

5. Tailwind CSS

Explain:

- Utility-First CSS
- Advantages of Tailwind CSS
- Responsive Utility Classes
- Component Styling

Include examples from your project.

6. Blade Components

Discuss:

- What are Blade Components?
- Why reusable components improve maintainability.

- Benefits of modular UI development.
- Include screenshots and sample code snippets.

7. User Interface Design

Describe:

- Color Palette
- Typography
- Iconography
- Button Styles
- Card Design
- Layout Consistency

Explain how these contribute to a better user experience.

8. Folder Structure

Describe the purpose of:

- resources/views/layouts
- resources/views/components
- resources/views/pages
- public
- screenshots
- documentation

9. Screenshots

Include screenshots of:

- Desktop View
- Tablet View
- Mobile View
- Navigation Bar
- Hero Section
- Features Section
- Pricing Section
- Testimonials
- Footer
- Blade Components Folder
- GitHub Repository

Design Requirements

Students are encouraged to:

- Follow a modern design system.
- Maintain consistent spacing and typography.
- Use a limited and harmonious color palette.
- Ensure sufficient color contrast for accessibility.
- Avoid copying existing websites directly.

Before-and-After Comparison

Students must document the evolution of their interface.

Include:

Before

- Initial wireframe or early prototype.
- Basic layout before styling.

After

- Final polished responsive interface.
- Improved visual hierarchy and usability.

Save comparison images in the documentation/ folder.

Screenshots Folder

Include screenshots of:

- Before Design
- After Design
- Desktop Layout
- Tablet Layout
- Mobile Layout
- Navigation Bar
- Hero Section
- Features Section
- Pricing Cards
- Testimonials
- Footer
- VS Code Project Structure
- Blade Components Folder
- GitHub Repository

LinkedIn Portfolio Activity

Students will publish a professional LinkedIn post documenting their Week 5 project.

Required Content

- Brief overview of the landing page project.
- Skills learned (Tailwind CSS, Blade Components, Responsive Design, UI/UX).
- Before-and-after screenshots.
- GitHub repository link.
- Reflection (2–3 sentences).

Sample Post

Week 5 – Client-Server Technologies

This week, I designed and developed a **Responsive Product Landing Page** using Laravel, Tailwind CSS, and Blade Components. I focused on creating a modern, reusable, and mobile-friendly interface while applying responsive design principles and component-based development.

Comparing my initial prototype with the final version showed how thoughtful UI improvements can enhance user experience and maintainability.

Submission Checklist

Before submitting, ensure that you have:

- Responsive landing page completed

- All required sections implemented
- Blade Components created and reused
- Tailwind CSS used throughout the project
- Desktop, tablet, and mobile layouts tested
- Public GitHub repository
- Minimum of 10 meaningful Git commits
- Complete README.md documentation
- Before-and-after comparison included
- Screenshots folder completed
- LinkedIn post published
- Repository link submitted through the LMS

Grading Rubric (100 Points)

Criteria	Excellent	Good	Fair	Needs Improvement	Points
Responsive Design & User Experience	Fully responsive across devices, intuitive layout, excellent visual hierarchy	Minor responsiveness issues	Functional but inconsistent responsiveness	Poor responsiveness or usability	25
Blade Components & Laravel Implementation	Proper use of reusable Blade Components, layouts, and clean Laravel structure	Minor implementation issues	Partial component reuse	Little or no use of Blade Components	20
UI Design & Tailwind CSS	Professional design, consistent styling, effective use of Tailwind utilities	Minor styling inconsistencies	Basic styling with limited polish	Poor or incomplete interface	20
GitHub Repository Management	Public repository, organized project, at least 10 meaningful commits, clear commit messages	Minor repository or commit issues	Limited commit history or organization	Repository missing, private, or poorly maintained	10
Technical Documentation (README.md)	Complete, detailed, includes responsive design concepts, Blade Components, UI design analysis, screenshots, problems, solutions, and reflection	Mostly complete with minor omissions	Several required sections missing	Minimal or incomplete documentation	15

LinkedIn Portfolio Post	Professional post with before-and-after screenshots, GitHub link, and thoughtful reflection	One required element missing	Basic post with limited explanation	Missing or incomplete post	5
Professionalism & Submission Compliance	Submitted on time, follows all instructions, demonstrates professionalism	Minor formatting or submission issues	Several instruction deviations	Late or major requirements missing	5
Total					100

Portfolio Milestone

By completing this activity, students will add a **professional responsive landing page** to their software development portfolio. This project demonstrates competence in **modern frontend development, responsive design, component-based architecture, and Laravel UI development**. It serves as evidence that the student can create visually appealing, maintainable, and production-inspired interfaces—skills expected of junior Laravel and frontend developers. Students should include this repository on their GitHub profile, showcase before-and-after improvements on LinkedIn, and feature the project in their personal portfolio website as an example of their growing expertise in client-server application development.
